Gang saws ::::

→ **Short Trak** Raw | Set | Stellite

→ **Stellite Short Trak** For narrow kerf cutting | For comminution

→ **Parameters**

Widths of saws available: **b** [mm] 35 to 80 | Thicknesses of saws available: **s** [mm] 0,8 to 2,45

→ **Use**

Saws for sawing every kind of wood. **Stellite Short Traks for narrow kerf cutting** are recommended for cutting thin boards. The saws are effective in sawing soft wood, wood of deciduous trees. **Stellite Short Traks for comminution** are recommended for cutting wood into the timber and for stiffening the frame (they are placed in the saw frame between the saws for narrow kerf cutting).

→ **Benefits**

- :: high precision of cutting,
- :: minimum cutting kerf which enables better use of wood (up to 20% wood saving),
- :: very economical,
- :: saws allow further processing of lamellas without any additional work stages,
- :: clean surfaces after sawing, ready to glue.

These saws are cut using laser that enables wide range of performance depending on the Customer's needs. Ro-Ma offers various materials, dimensions and methods of performance. The final product we supply fits all the specific of application.

- ❗ Short Trak saws are produced on special orders. The order should include exact parameters of the saw, drawing and kind of material.
